

CS-225: Discrete Structures in CS

Assignment 7 Part 1

Noah Hinojos

March 13, 2024

What stood out to you as the most important things you learned about computer programming this quarter? Why do you think they're important?

What stood out to me the most was the importance of syntax and formality when writing code. I see the value of consistency, it makes the code readable and easier to understand.

What topics do you still find confusing? What can you do to get a better grasp on them?

There really isn't anything I find still confusing since I have pretty extensive knowledge of Python coming into this course.

What did you learn this quarter about how taking online courses works for you?

I learned how to manage my time more effectively, yet also the difficulty of overcoming certain learning objectives with my classmates.

How did you use the Exploration and the videos provided? What techniques helped you learn better and when they didn't help you, what did you do?

No I did not. Again, I had quite extensive knowledge of Python coming into this course.

How can you generalize your experience in this course in a way that will help you in future courses?

The course works well when you have an established weekly routine, as would all courses I imagine.

How has this course helped crystallize your ideas about what a career that involves computer programming might be like?

There isn't really much I can say on this. I don't know. Perhaps it showed me the true challenge when working with others on programming.
